

Computing Subject Overview

The national curriculum for computing in England was introduced by the Department of Education in 2014. The curriculum aims to equip young people with the knowledge, skills and understanding they need to thrive in the digital world of today and the future. The curriculum can be broken down into 3 strands: computer science, information technology and digital literacy, with the aims of the curriculum reflecting this distinction. Here at The Bishops' we have added Internet Safety as a 4th strand to run throughout everything we do.

We will utilise Barefoot Computing Resources to support the computer science strands of the curriculum and elements of the information technology and digital literacy aspects of computing. In addition, the Barefoot resources are cross-curricular, making a broad range of links with other subjects from the English national curriculum. A range of other resources will support our curriculum delivery, including but not limited to: National Online Safety, Digital Literacy and Citizenship from Common sense education, Google Code Club, Think You Know, Project Evolve and Scratch Junior.

Throughout the primary curriculum, pupils learn how to use a range of 'programming languages. This includes developing computational-thinking skills associated with the process of programming, such as algorithms and decomposing problems into a sequence of steps and using logical reasoning to predict outcomes. As pupils progress, specific knowledge and understanding relating to programming is defined, for example the use of sequence, selection, repetition and variables. In addition, pupils learn about the workings of computers and computer networks such as the internet.

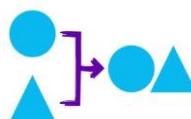

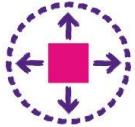

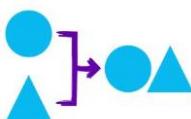

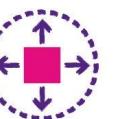

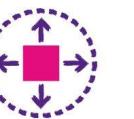

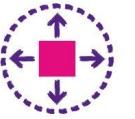

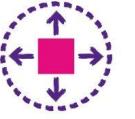

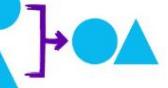

Curriculum Intent, Implementation and Impact Overview

Subject: Computing		Subject Leader: Ingrid Yeomans														
Intent	Implementation		Impact													
<p>At The Bishops' we want pupils to be Masters of Technology and not slaves to it.</p> <p>Technology is everywhere and will play a pivotal part in students' lives. Therefore, we want to model and educate our pupils on how to use technology positively, responsibly and safely. We want our pupils to be creators not consumers and our broad curriculum (encompassing computer science, information technology and digital literacy) reflects this. We want our pupils to understand that there is always a choice with using technology and as a school we utilise technology (especially social media) to model positive use. We recognise that the best prevention for a lot of issues we currently see with technology/social media is through education. We recognise that technology can allow pupils to share their learning in creative ways. We also understand the accessibility opportunities technology can provide for our pupils. Our knowledge rich curriculum has to be balanced with the opportunity for pupils to apply their knowledge creatively, which will in turn help our pupils become skilful computer scientists. We encourage staff to try and embed computing across the whole curriculum to make</p>	<p>We have created a comprehensive curriculum progression document for staff to follow to best embed and cover every element of the computing national curriculum. The knowledge/skills statements build year on year to deepen and challenge our learners.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="background-color: #d3d3d3;">Computer science</th> <th style="background-color: #d3d3d3;">Information Technology</th> <th style="background-color: #d3d3d3;">Digital Literacy</th> </tr> <tr> <td> <p>Can understand and apply the fundamental principles and concepts of computer science, including abstraction, logic, algorithms and data representation.</p> <p>Can analyse problems in computational terms, and have repeated practical experience of writing computer programs in order to solve such problems</p> </td><td> <p>Can evaluate and apply information technology, including new or unfamiliar technologies, analytically to solve problems</p> </td><td> <p>Are responsible, competent, confident and creative users of information and communication technology.</p> </td></tr> <tr> <th style="background-color: #d3d3d3;">Internet Safety</th><th colspan="2" rowspan="2"></th></tr> <tr> <td colspan="3"> <p>When online apply the SMART safety rules: S – Keep your personal details safe. M – Never meet strangers face to face. A – Do not accept or respond to files, images or emails from strangers. R – Make sure all that you read is reliable. T – tell someone you trust if you feel uncomfortable.</p> <p>Always apply the THINK Netiquette rules: T – is it true? H – is it high quality? I – is it informative? N – is it necessary? K – is it kind?</p> </td></tr> <tr> <td colspan="2"> <p>We feel that the majority of computing should be embedded across the curriculum and delivered within all other subjects, both core and topic. This will be explicit in each Year Groups medium term plans so that coverage can be ensured. We also want our pupils to have opportunities to learn computing skills both using technology but also unplugged so they can begin to make their own links and problem solve. Barefoot Computing was the perfect resource to support this and will form the basis of our Computer Science delivery.</p> <p>In addition to the computing skills being taught across the curriculum each half term classes will dedicate 1 to 2 full days to its discrete delivery. This is necessary as the computer science part of the computing curriculum will often, but not always, need a more explicit approach.</p> <p>For example: If my class were covering World War 2 in Year 6 and we are exploring how the Second World War started, I could set the children the task of creating a video explaining this. First, the children may want to research some more information about how the Nazi party rose to power. This would involve covering some Digital Literacy: Managing Online Information –</p> <ul style="list-style-type: none"> • I can use search technologies effectively. • I can explain how search engines work and how results are selected and ranked. </td><td> <p>Finding the right balance with technology is key to an effective education and a healthy life-style. We feel the way we implement computing helps children realise the need for the right balance and one they can continue to build on in their next stage of education and beyond. We encourage regular discussions between staff and pupils to best embed and understand this.</p> <p>The way pupils showcase, share, celebrate and publish their work will best show the impact of our curriculum. We also look for evidence through reviewing pupil's knowledge and skills digitally through tools like Google Drive and Seesaw and observing learning regularly.</p> <p>Progress of our computing curriculum is demonstrated through outcomes and the record of coverage in the process of achieving these outcomes.</p> <p>This year we will be implementing a digital passport which pupils will carry with them throughout primary school to store, evidence and build upon their</p> </td></tr> </table>	Computer science	Information Technology	Digital Literacy	<p>Can understand and apply the fundamental principles and concepts of computer science, including abstraction, logic, algorithms and data representation.</p> <p>Can analyse problems in computational terms, and have repeated practical experience of writing computer programs in order to solve such problems</p>	<p>Can evaluate and apply information technology, including new or unfamiliar technologies, analytically to solve problems</p>	<p>Are responsible, competent, confident and creative users of information and communication technology.</p>	Internet Safety			<p>When online apply the SMART safety rules: S – Keep your personal details safe.  We encourage our children to enjoy and value the curriculum we deliver. We will constantly ask the **Why** behind their learning and not just the **How**. We want learners to discuss, reflect and appreciate the impact computing has on their learning, development and well being. |

<p>learning creative and accessible. We want our pupils to be fluent with a range of tools to best express their understanding and hope by Upper Key Stage 2, children have the independence and confidence to choose the best tool to fulfil the task and challenge set by teachers. As with all aspects of our curriculum plans are driven by the schools Christian Values and Ethos. For this reason we have decided to treat Online Safety as a separate strand which will run throughout the year and be adapted to the needs of the children in each class and current technological issues.</p>	<ul style="list-style-type: none"> • I can demonstrate the strategies I would apply to be discerning in evaluating digital content. • I can describe how some online information can be opinion and can offer examples. <p>If the pupils were to then create a video using an app such as Adobe Spark Video to demonstrate their learning, they would be covering some of the Information Technology: Video Creation –</p> <ul style="list-style-type: none"> • I can create videos using a range of media – green screen, animations, film and image. <p>If the pupils were to then upload or publish their work on a blog or platform such as Seesaw, we would also be covering this objective from Information Technology: Word Processing objectives –</p> <ul style="list-style-type: none"> • I can publish my documents online regularly and discuss the audience and purpose of my content. <p>Even though this would be a History lesson, we would be covering a fair few computing objectives therefore if we need to spend more time on other subjects that week, we are still covering computing without having a timetabled computing session. This is the way we want computing delivered in Primary schools, embedded to allow learning to be more accessible and allow learners to be more creative in demonstrating their learning.</p>	<p>computing skills during their time at The Bishops'.</p>

Social, Moral, Spiritual, Cultural Links

Spiritual

Computing supports spiritual development by looking at how research can bring rapid benefits to discussions and tolerance to an individual's beliefs. However, children are also exposed to the limitations and abuse of the internet where they question and justify the aims, values and principles of their own and others' belief systems.

Moral

Computing supports moral development by looking at how developments have had an impact on the environment as technology has meant that old ways of working have been changed to help the environment.

Social

The development in technology has impacted different cultures and backgrounds in different ways. More developed countries are able to keep pace with the developments in technology whilst less developed ones can't.

Cultural

The development in technology has impacted different cultures and backgrounds in different ways. More developed countries are able to keep pace with the developments in technology whilst less developed ones can't.
